

# STARBASE

Revolutionary Portable Inflatable Light Tower For Area OR Spot Illumination

Patent Pending

- Emergency Responders
- Expressway Night Work
- Search & Rescue Teams
- Construction Site Lights
- Outdoor Party Lighting

The **LightHouse** Series has a Big Brother! The new **STARBASE** is the most versatile light tower you can own. This portable 50 lb unit uses a super-efficient 1000 watt metal halide lamp to light an area 100 feet in all directions brightly enough to read text.

Or, bend the light tower to point it like a spotlight, then tie off in position. Extreme versatility in package that one person can carry and setup in minutes.

Its built-in inflatable legs give excellent natural stability. Included custom bags hold standard gallon water jugs or sand that quickly clip off to rings on the leg ends for extra stability in winds...or you can stake down with the included stakes.

Our towers are manufactured in Cookeville, TN by the same skilled craftspeople that build balloons and airships for the US military.

Huge 360° Area Lighting

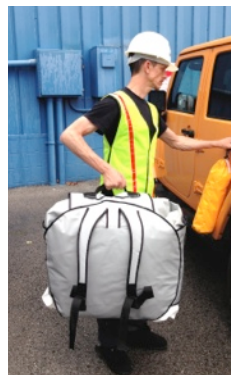

Or, bend like a gooseneck lamp

Aim where you need it & lock in place
